

PDF Reader

Quick Start Guide

Add PDF documents from iOS sharing.

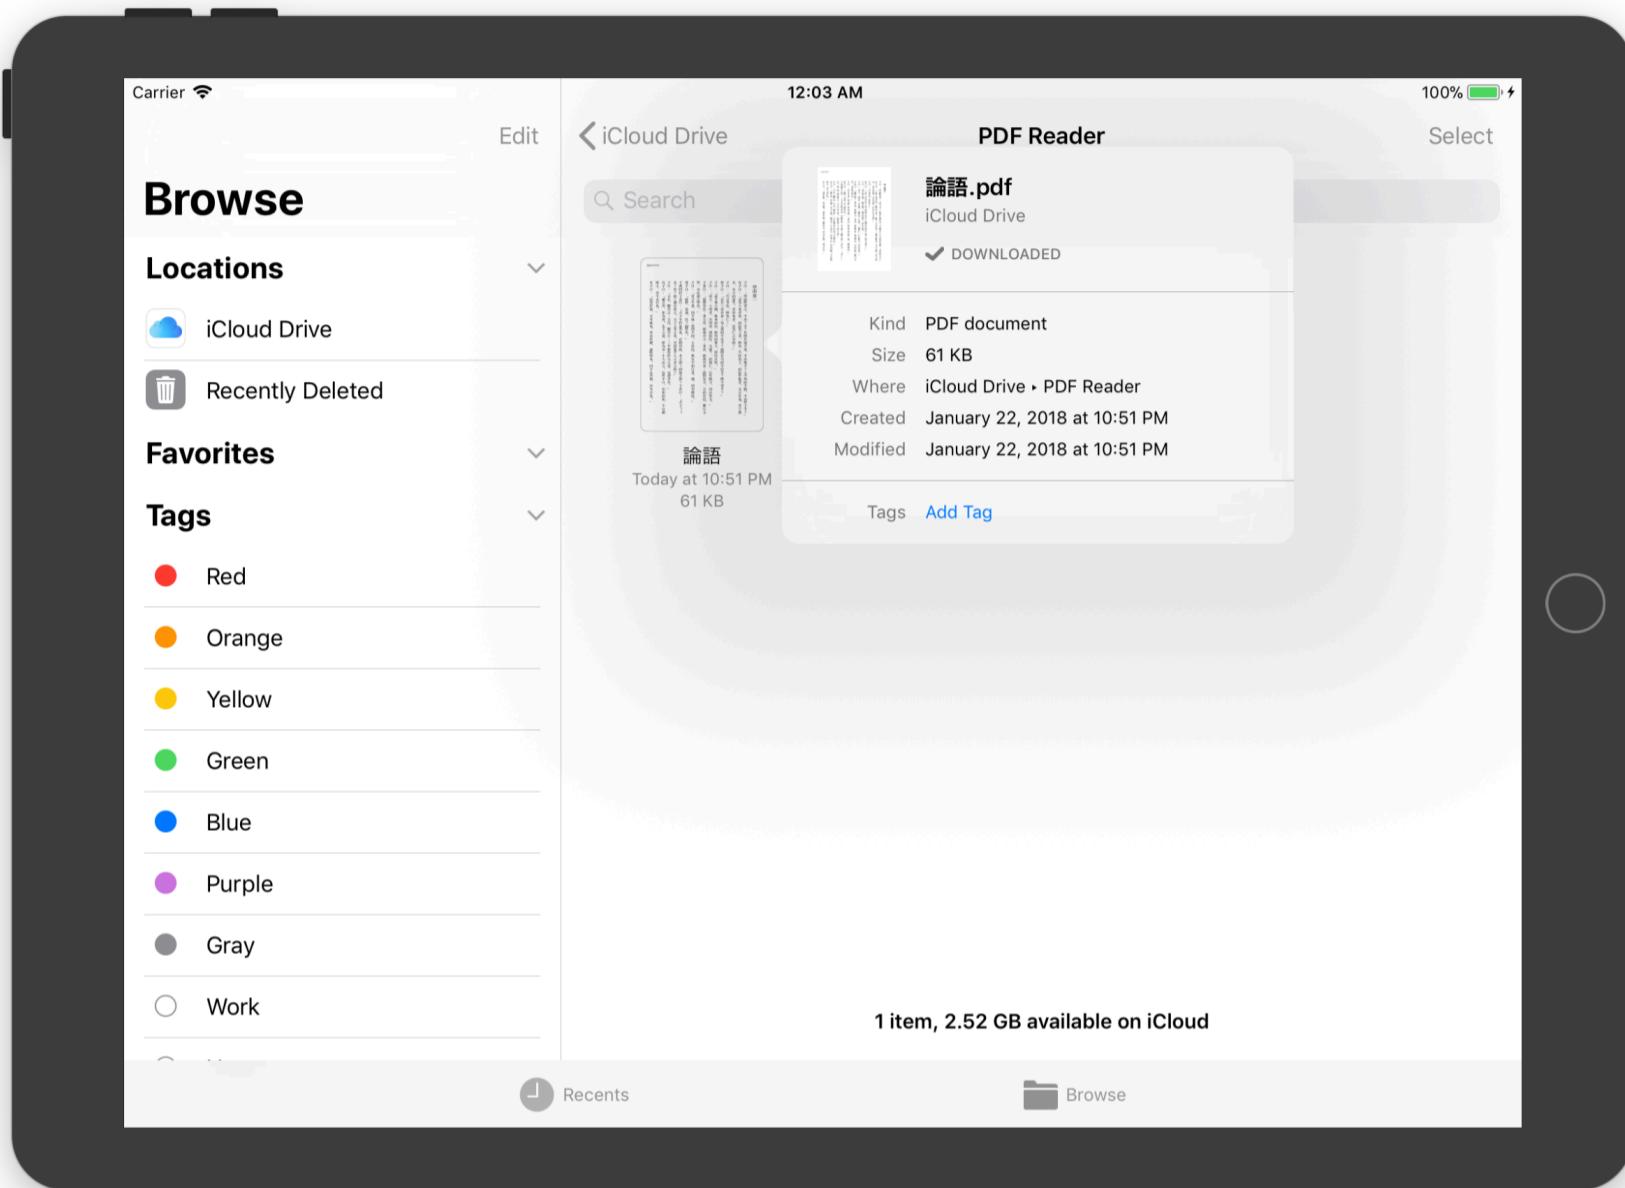

You can add PDF files from Safari, Email or other apps that system wide sharing is supported.

Tap "Copy to PDF Reader".
Then get started.

Like the Files app on iOS.

PDF Reader uses the same interface to manage documents. It's easy to use, and functionality.

Remember Reading Position.

PDF Reader use a dedicated database to keep track every file.

You can even delete, restore, move or rename a PDF document.

It doesn't matter, your reading position won't be lost.

Information is stored on local database.

Also stored on iCloud.

If you have two or more iOS devices.

Sign in the same iCloud account.

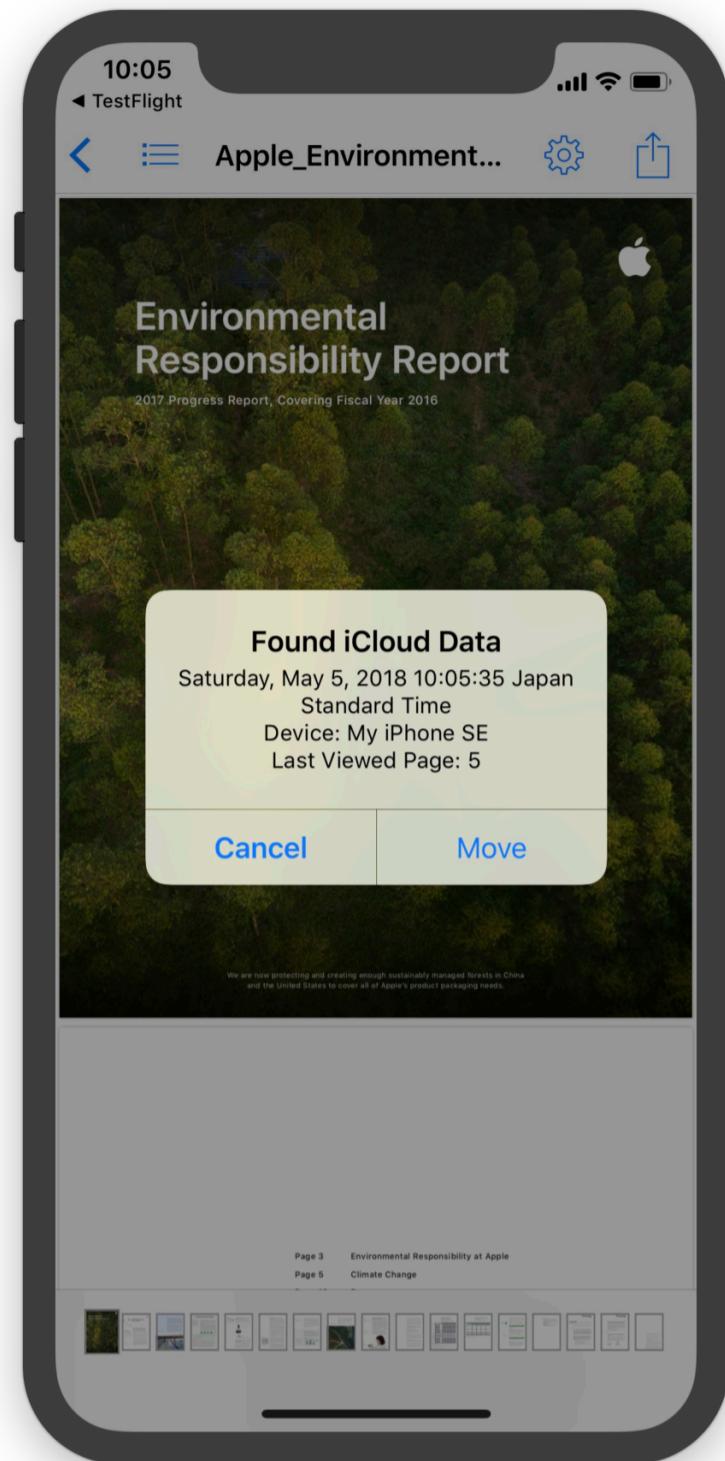

Put documents in iCloud Drive.

Reading Position is updated to iCloud when close a PDF file.

If you don't want to use iCloud.

iOS allows you to turn off or delete iCloud for a specific app.

Reading position is still remembered in local database.

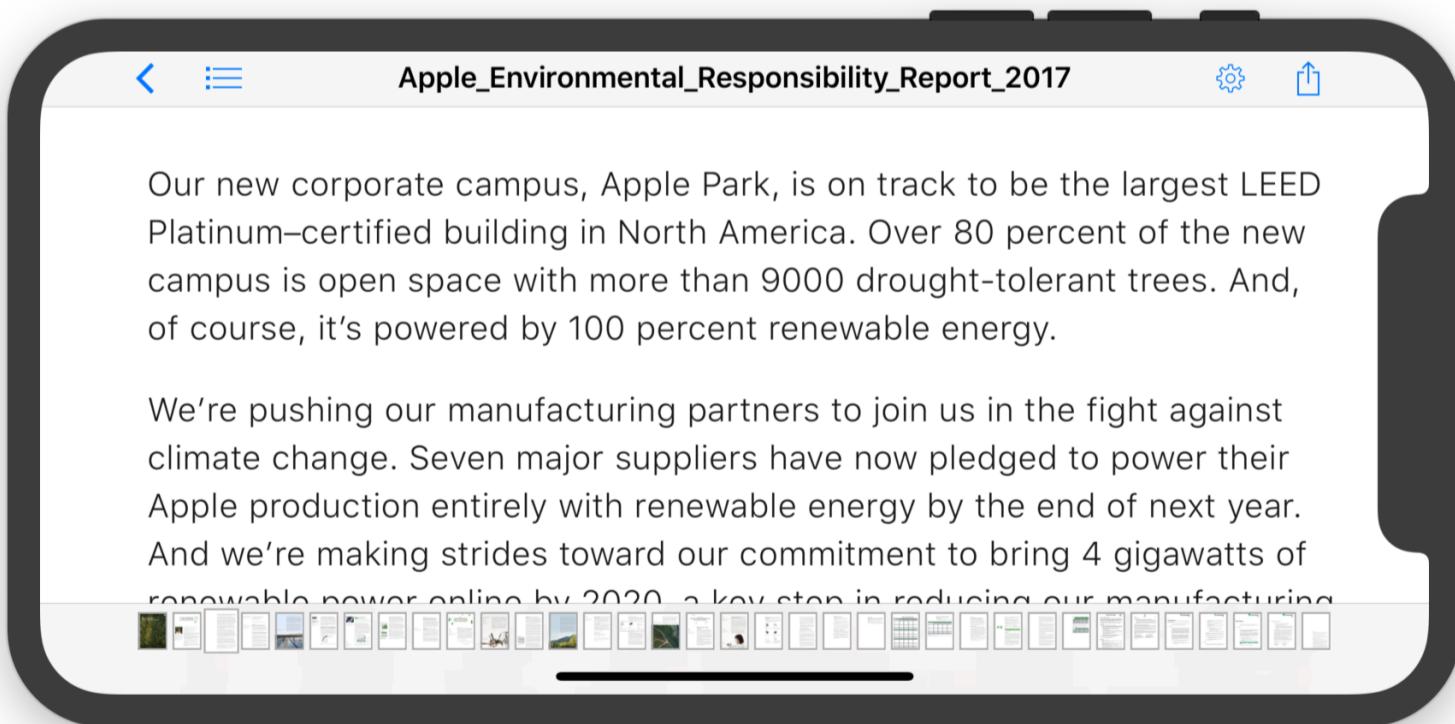

Double tap on a line of text to Smart Zoom.

You can double TAP HERE to see how Smart Zoom fit on screen.

Then double tap again to zoom out.

Double TAP HERE to fit a short line.

You can use two fingers to adjust zoom factor.

Right-to-Left (RTL) for some writing system.

Like Arabic and vertical CJK documents.

You might need a RTL mode to get better reading experiences.

Tap the “Gear” on top right.

Then enable “Right-to-Left”

Now the page displays from right to left.

Thank You!
